PATENT APPLICATION

UNO CASINO GAMING SYSTEM AND METHOD

Application Type: Utility Patent Application **Inventor:** Antwaun Maxwell **Filing Date:** September 10, 2025 **Application Number:** [To be assigned]

FIELD OF THE INVENTION

This invention relates to casino gaming systems, specifically to a novel table game that combines the popular card game UNO with casino-style betting mechanics and poker-inspired wagering structures to create a new form of entertainment gaming suitable for casino environments.

BACKGROUND OF THE INVENTION

Traditional casino table games have remained largely unchanged for decades, with blackjack, poker, baccarat, and roulette dominating casino floors. While these games have proven successful, there exists a significant opportunity to attract new demographics, particularly younger players who seek more engaging and familiar gaming experiences.

The card game UNO, created by Merle Robbins in 1971 and currently owned by Mattel, Inc., has achieved global recognition with over 150 million units sold worldwide. UNO's simple rules, social interaction elements, and universal appeal make it an ideal candidate for adaptation into a casino gaming format.

Current casino gaming lacks: 1. Games that appeal to millennials and Generation Z demographics 2. Social interaction elements that encourage group play 3. Familiar intellectual properties that reduce learning curves 4. Progressive betting structures that maintain player engagement 5. Tournament formats suitable for competitive play

Prior art in casino gaming includes various attempts to adapt popular games for casino use, but none have successfully combined the specific elements of UNO's gameplay with sophisticated casino betting mechanics and anti-counting security measures.

SUMMARY OF THE INVENTION

The present invention provides a casino gaming system that adapts the popular card game UNO into a sophisticated table game suitable for casino environments. The system includes:

1. **Modified UNO Card Deck:** Specially designed casino-grade cards with anti-counting security features, RFID technology integration, and sacred geometry patterns that prevent edge sorting and card identification.

2. **Specialized Gaming Table:** Custom table layout accommodating 6-8 players with designated betting areas, chip wells, dealer position, and integrated technology for card tracking and game management.

3. **Progressive Betting Structure:** Multi-round wagering system combining elements of poker betting with UNO gameplay, including ante bets, action bets, color bonus bets, and progressive jackpots.

4. **Tournament Format:** Structured competitive play system with elimination rounds, point accumulation, and prize distribution suitable for casino tournament operations.

5. **Anti-Fraud Security System:** Comprehensive security measures including RFID card tracking, video surveillance integration, and dealer training protocols to prevent cheating and ensure game integrity.

The invention solves the technical problem of adapting a casual card game into a regulated casino gaming environment while maintaining the social and entertainment aspects that make UNO appealing to players.

DETAILED DESCRIPTION OF THE INVENTION

Card Deck Specifications

The UNO Casino Gaming system utilizes a modified deck of 108 cards based on the traditional UNO card composition but enhanced for casino use:

Card Categories: - Number Cards: 76 cards (0-9 in four colors: red, yellow, green, blue) - Action Cards: 24 cards (Skip, Reverse, Draw Two in four colors) - Wild Cards: 8 cards (4 Wild, 4 Wild Draw Four)

Security Features: - Sacred geometry patterns on card backs preventing edge sorting - RFID chips embedded for real-time tracking - UV-reactive inks for authenticity verification - Micro-patterns visible only under magnification - Anti-counterfeiting holographic elements - Serial numbers for individual card identification

Physical Specifications: - 100% plastic construction for durability - Standard poker size (2.5" x 3.5") - Bend resistance up to 180 degrees - Washable surfaces for hygiene maintenance - Fade-resistant inks for color integrity

Gaming Table Design

The specialized gaming table incorporates multiple design elements optimized for casino operations:

Table Dimensions: - Semi-circular design accommodating 6 players - 8-foot diameter with dealer position - Felt surface with UNO color scheme integration - Raised edges for card and chip containment

Betting Areas: - Individual player positions with multiple betting circles - Ante bet area (required entry wager) - Action bet area (optional strategic wagers) - Color bonus bet area (side bet opportunities) - Progressive jackpot contribution area

Technology Integration: - RFID readers at each player position - Dealer chip tray with counting technology - Digital display for progressive jackpot amounts - Card shuffling machine integration - Video surveillance mounting points

Betting Structure and Game Mechanics

Phase 1: Ante and Initial Deal 1. All players place mandatory ante bet (5—100 range) 2. Each player receives 7 cards 3. Top card of deck is turned face up to start discard pile 4. Progressive jackpot contributions collected (10% of ante bets)

Phase 2: Primary Gameplay 1. Players take turns matching color, number, or action 2. Action cards trigger special betting opportunities: - Skip: Next player loses turn, betting continues - Reverse: Direction changes, new betting round - Draw Two: Target player draws cards, side bet opportunities - Wild: Player chooses color, color bonus bets activated

Phase 3: Strategic Betting Rounds 1. After each action card played, betting round occurs 2. Players may fold, call, or raise based on hand strength 3. Pot accumulates throughout gameplay 4. Side bets resolved based on specific outcomes

Phase 4: Resolution and Payout 1. First player to empty hand wins primary pot 2. Remaining players ranked by cards remaining 3. Side bets paid according to established odds 4. Progressive jackpot triggered by specific conditions 5. New hand begins with increased ante structure

Security and Anti-Fraud Measures

Card Security: - RFID tracking prevents card switching - Sacred geometry patterns eliminate edge sorting - Dealer training on card handling protocols - Regular deck inspection and replacement schedules

Betting Security: - All wagers tracked electronically - Video surveillance of all betting actions - Dealer verification of bet amounts - Automatic calculation of payouts

Player Security: - Identity verification for large wagers - Betting limit enforcement - Responsible gaming protocols - Dispute resolution procedures

Tournament Structure

Qualification Rounds: - Multiple tables with 6-8 players each - Predetermined number of hands per round - Point accumulation system based on finishing position - Top performers advance to elimination rounds

Championship Format: - Single-elimination bracket structure - Increased ante amounts for higher stakes - Progressive prize pool distribution - Live streaming and spectator areas

---

CLAIMS

Claim 1: A casino gaming system comprising a modified UNO card deck with embedded RFID technology, sacred geometry security patterns, and casino-grade construction materials, adapted for use in regulated gaming environments.

Claim 2: A specialized gaming table designed for UNO Casino Gaming with multiple betting areas, RFID reading capability, and integrated technology for game management and security monitoring.

Claim 3: A progressive betting structure that combines UNO gameplay mechanics with poker-style wagering, including ante bets, action-triggered betting rounds, and side bet opportunities.

Claim 4: A method of conducting UNO Casino Gaming comprising the steps of collecting ante bets, dealing cards according to UNO rules, conducting betting rounds triggered by action cards, and resolving payouts based on game outcomes.

Claim 5: An anti-fraud security system for UNO Casino Gaming incorporating RFID card tracking, video surveillance integration, and dealer training protocols to ensure game integrity.

Claim 6: A tournament format for UNO Casino Gaming with qualification rounds, elimination brackets, and progressive prize pool distribution suitable for casino tournament operations.

Claim 7: Sacred geometry card back patterns specifically designed to prevent edge sorting, card counting, and other advantage play techniques while maintaining aesthetic appeal.

Claim 8: A method of integrating traditional UNO gameplay with casino betting mechanics while preserving the social interaction and entertainment value of the original game.

Claim 9: A comprehensive gaming system that addresses the technical challenges of adapting a casual card game for regulated casino use while maintaining player engagement and operational efficiency.

Claim 10: A revenue generation system for casinos that creates new income streams through innovative game design, demographic expansion, and tournament operations.

ABSTRACT

A casino gaming system that adapts the popular card game UNO for use in regulated gaming environments. The system includes a modified card deck with security features, a specialized gaming table with multiple betting areas, and a progressive betting structure that combines UNO gameplay with poker-style wagering. The invention addresses the need for new casino games that appeal to younger demographics while maintaining the security and operational requirements of casino gaming. The system includes comprehensive anti-fraud measures, tournament capabilities, and revenue optimization features designed for commercial casino operations.

INVENTOR DECLARATION

I, Antwaun Maxwell, declare that I am the original inventor of the UNO Casino Gaming System and Method described in this application. I have conceived and developed this invention independently, and I believe it to be novel, non-obvious, and useful for its intended purpose in casino gaming environments.

Inventor Signature: _____ **Date:** September 10, 2025 **Inventor Name:** Antwaun Maxwell **Address:** [To be provided] **Employee ID:** 180286 (Seminole Classic Casino)

BLOCKCHAIN VERIFICATION

Document Hash: [To be generated upon blockchain deployment] **NFT Token ID:** [To be assigned upon minting] **Blockchain Network:** [To be specified] **Timestamp:**

[Immutable blockchain timestamp] **Creator Wallet:** [Public key verification]

This document is designed for immediate blockchain deployment as an NFT to establish immutable proof of invention date and creator ownership.
